## DETAILED ACTION

### *Claim Objections*

1. Claims 1-4 are objected to because of the following informalities: the terms "is inserted is protruded" as recited in claim 1 is confusing. The examiner interprets the terms "is inserted is protruded" as "is inserted" . Appropriate correction is required.

### *Claim Rejections - 35 U.S.C. 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --  
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Wilson (US patent 4,533,200).

Wilson's device discloses a wire connector comprising a first connecting body from which a male (32) terminal protruded, and a second terminal connecting body from which the female terminal (44) to which the male terminal portion at the upper level is inserted, the second connecting body fitted to the first connecting body (see fig. 1); wherein the female terminal is formed in a fork shape having an opening (see fig. 3) arranged to oppose arranged to oppose the male terminal, and wherein an acute angle portion which bust through the coating body (see fig. 1) of a harness is provided between the tip end portions of the fork part, and a conductive wire (12, 12', 12'') connecting portion

which grips a conductive wire portion of the harness which has been bust through by an acute angle portion (see fig. 2) is provided is provided between the base end portions of the fork part, and a terminal receptor to which the male terminal is inserted between the middle portion of the fork part. A disengagement preventing means at 62 holds the conductor in a fitted state between the first and second connecting body at 74.

### *Conclusion*

3. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Prior art fails to disclose the combination features recited in claims 1 and 2 with the positioning means and the rotational limitation placed between the first and the second connecting body.
